AGAWAM LAKE WILDLIFE MANAGEMENT AREA  
(Stockbridge & Gt. Barrington)

- Size: 779.8 total acres of which 282 acres are under a conservation restriction.
- Access: No formal parking areas. Parking can be done at an informal gravel rest area on the west side of Rte. 7 at the Agawam Brook crossing. Additional parking during the shotgun deer season is located on the east side of Rte. 7 through a gate leading up to Evergreen Hill.
- Vegetation: A variety of habitats can be found such as forests, wetlands and old fields. A very steep hill, rising over 750 vertical feet in just over 1500 ground feet, guards the west side of the lake. This section is part of a conservation easement that leads up to Flag Rock.
- Water: The approximately 18 acre lake is surrounded by roughly 100 acres of nearly impenetrable marsh making Agawam Lake a quiet haven for wildlife. Winter renders the pond accessible to ice fishermen who catch small pickerel and perch. Approximately 1965 feet of Konkapot Brook form the eastern boundary.
- Wildlife: Flag Rock is an historic nesting aerie for Peregrine falcons. Bobcats frequent the area as do deer, bears, coyotes, woodcock and occasionally moose. Great blue herons nest along Konkapot Brook.
- Special Regulations:
